Microbiology Collection Devices

This chart lists the test code, test name, transport medium, and transport temperature of commonly-ordered microbiology tests, along with pictures of the various transport medium devices. Before collecting a specimen, check the **expiration date of the collection media**. Use of collection swabs or containers that are expired may result in the specimen being rejected. All specimens must be labeled with the patient's full name, date of collection, and initials of the person collecting the specimen. If you are collecting for a test not mentioned on this chart, please refer to the Virtual Test Guide and/or the Test Directory, both of which are located on dlolab.com.

The information on this chart is valid as of November 17, 2021 and is subject to change without notice.
